M600 BLADDER UPGRADE

MAINTENANCE AND PERFORMANCE IMPROVEMENT

manroland Goss is excited to offer a permanent upgrade to your M-600 bladder actuated plate cylinders. This patent pending solution operates using air cylinders to open and close the reel rod, making the bladder a thing of the past. It is completely retrofittable on your existing bladder actuated cylinders.

manroland Goss has successfully manufactured and tested the design, operating it over 330,000 cycles. Maintenance is easy – all the operational parts are located outside the cylinder body and can be replaced without removing the cylinder. Although we recommend doing a minimum of one unit at a time, since there are no changes to the printing plate or operator interface this upgrade can be done on a single cylinder.

Specifications, features and dimensions are subject to availability along with change without prior notice
